

## FORGES TARDIEU + INTERIS MAGUIN JOINING FORCES TO DELIVER SOLUTIONS IN THE BIOETHANOL, INDUSTRIAL ALCOHOL (REN) & EXTRA NEUTRAL ALCOHOL (ENA) SECTORS ACROSS AFRICA

**FORGES TARDIEU** Ltd and **INTERIS MAGUIN** concluded this October 2016 a Strategic Alliance Agreement for working on mutually identified projects in Africa.

**FORGES TARDIEU** is an engineering group, with its global head offices located in the Republic of Mauritius. It has evolved over its 166 years of operations from being a specialized mechanical designer and manufacturer to being an internationally recognized EPCC/EPCCM (Engineering, Procurement, Construction, Commissioning and Management) engineering contractor, providing its services to more than 46 countries in Africa, South America and Asia. The group has strategically decided to focus its development on the Sugar Cane, the Mining, the Naval and the Oil & Gas Industries; and is currently growing at an exponential rate.

**INTERIS MAGUIN** is a recognized specialist, with more than 20 years of experience in the production of Bioethanol, Industrial Alcohol (REN) and Extra Neutral Alcohol (ENA). Its skills, recognized in its Processes, cover all stages of sweet and starchy raw material transformation into any grades of alcohol. The experience of Maguin-Interis in the transformation of raw materials resulting from Sugar Beet, Sugar Cane and Grain form a unique base of knowledge for the use of new raw materials such as Cereal or Sweet Sorghum, Manioc and other substrates.

Its expertise in fermentative biology, its mastery of purification techniques, its know-how in recovery of energy and its experience in Engineering guarantee its Customers the realization of integrated and optimized units producing the best alcohol qualities with the lowest energy consumptions. As a Process Engineer, Maguin-Interis offers on the international stage the realization of alcohol plants on the Process Turn-Key (or EP+M) concept: Engineering Procurement and Management, and Supervision of construction and commissioning. Determinedly forward-looking to 2nd generation bio-fuels, Maguin-Interis is partner in several programs of Research and Development for the industrialization of new processes for lignocellulosic biomass transformation.

This alliance has the particularity, while not involving any cross-equity participation by either group, to allow both entities to develop EPC & EPCC projects in the Bioethanol, Industrial Alcohol (REN) and Extra Neutral Alcohol (ENA) fields, jointly and insolido, where **FORGES TARDIEU** will act as the main EPCC / EPCCM contractor with **INTERIS MAGUIN** being then the main technological subcontractor as per the projects specifics.

This agreement despite the fact that **FORGES TARDIEU** Ltd and **INTERIS MAGUIN** are already present in Africa will surely unlock to the full potentiality of both groups in securing major EPC/ EPCC contracts in the distillery sector.

This will ensure that the distillery needs of the selected markets are fully met and satisfied for segments & sectors specifically catered by **FORGES TARDIEU & INTERIS MAGUIN**.

### AT YOUR SERVICE

Do not hesitate to contact us or to connect on our website for more information about both groups.
